Air Transport IT Services, Inc.
Software Engineer I
Job Posting

AirIT is a single source provider and integrator of diversified information technology products and services to the air transportation and seaport industry, offering a full complement of operations, passenger processing and business management systems. From the ramp to revenue management, we have more than 20 years' experience providing our customers with a comprehensive portfolio of integrated technology solutions and services including system integration, software, hardware, network, installation, and 24x7 service, support and help desk.

Summary:
Researches, designs, and develops computer software systems, in conjunction with hardware product development, by performing the following duties. This position is to support our team in the development of a worldwide message exchange system with very high throughput in the aviation industry. **This position is based in Orlando, FL. Expected start date is January 3rd, 2017.**

Essential Duties and Responsibilities: Other duties may be assigned.

- Analyzes software requirements to determine feasibility of design within time and cost constraints.

- Participates in designing, coding, testing, debugging, configuring, and documenting of software products.

- Consults with hardware engineers and other engineering staff to evaluate interface between hardware and software, and operational and performance requirements of overall system.

- Designs and implements interfaces and middleware software for the integration of Air Transport products into the airport/aviation industry and operating environments.

- Develops and directs software system testing procedures, programming, and documentation.

- Applies generally accepted programming standards and techniques to assure efficient program logic and data manipulation.

- Consults with customer concerning maintenance of software system.

- Diagnoses and resolves software problems.

- Coordinates installation of software system.

Qualifications:
To perform this job successfully, an individual should have intermediate knowledge of Database software; Design software; Development software; Internet software; and office suite software like word processing and spreadsheet

Required Education and/or Experience:
- Bachelor's degree (B. A. or B. S.) from four-year College or university; or 3 to 4 years related experience and/or training; or equivalent combination of education and experience.

- Intermediate or higher Java and HTML5/CSS/JavaScript experience, RDBMS experience such as Oracle or SQL Server, user interface development (classical and/or rich web clients)

Desired Experience & Skills:
- AngularJS or other JavaScript Frameworks, JBoss Wildfly or other EJB Containers, (RESTful) Web Services, EJB 3.0, .NET framework
