Air Transport IT Services, Inc.
Solution Design Engineer
Job Posting

AirIT is a single source provider and integrator of diversified information technology products and services to the air transportation and seaport industry, offering a full complement of operations, passenger processing and business management systems. From the ramp to revenue management, we have more than 20 years' experience providing our customers with a comprehensive portfolio of integrated technology solutions and services including system integration, software, hardware, network, installation, and 24x7 service, support and help desk.

We are currently seeking a **Solution Design Engineer** to join our **Orlando, FL** office. This position is responsible for collecting requirements and providing functional design of application software, as well as coordinating/providing implementation solution documents, user training and QA testing. This job requires working regularly with other departments in order to coordinate these activities. **The estimated start date for this position is January 2017**.

Essential Duties and Responsibilities: include the following. Other duties may be assigned.

- Participates in the functional design, testing, configuration, and documenting software
- Assumes the QA and Product Owner role in the AirIT's scrum methodology process for software development
- Assumes the role of gathering requirements for software to be developed
- Performs GAP analysis of software for new projects
- Supports the sale department with technical information and provides product demos for prospective and existing customers
- Participates in proposal process and supports sales by providing software and hardware cost estimates
- Responsible for providing training of application software.
- Works with R&D in support of the development process.
- Consults and analyzes the business/operation objectives of the customers and develops solution design documents to their business issues
- Ability to analyze the entire airport operation including data, goals, process and organization.
- Evaluates information harvested through surveys and workshops, task analysis, and business process description
- Has strong technical skills, business intelligence, and a full understanding of the needs of the customers
- Able to effectively communicate with external clients and internal teams to deliver applications, interfaces and system designs according to the contractual agreements
- Ability to be the interface between technology teams, support teams and business units
- Ensures that the recommended solution is both commercial and competitive

Qualifications:

To perform this job successfully, an individual must be able to perform each essential duty satisfactorily. The requirements listed below are representative of the knowledge, skill, and/or ability required. Reasonable accommodations may be made to enable individuals with disabilities to perform the essential functions.

Required Education and/or Experience:
- Bachelor's degree (B. A.) from four-year College or university; or one to two years related experience and/or training; or equivalent combination of education and experience
- Must be able to travel at least 30% of the time on a flexible schedule
- 1-2 years' experience in IT consulting required

AirIT is proud to be an EOE employer
