

AirIT Announces the Commercial Release of Its New Mobile Application Platform

FOR IMMEDIATE RELEASE

January 5, 2015, Orlando, FL – AirIT, the leading provider of innovative information technology products and services to the air transportation industry, announced today that its new mobile application platform solution is officially available, effective immediately.

Upon implementation, the mobile platform will allow all of AirIT's existing customers to have true unfettered administrative mobile access to the full suite of AirIT's operational, passenger processing, and business systems. This new functionality will add immediate exponential value to an airport's existing systems, as it will now be possible to manage and interact with those systems remotely by utilizing a smartphone or tablet. Whether immediately accessing existing tenant contracts and agreements, or having the ability to edit resource management or FIDS data on the fly, airports will quickly recognize the inherent value-add provided by the new mobile platform.

Comments Betros Wakim, AirIT CEO, "We are extremely excited to deliver this new level of access and usability through our mobile platform technology. Our customers have been requesting this solution for quite some time and we are very happy to bring it to the market. We have spent considerable time listening and testing this product with our customers and we are anxious to deliver the fruits of that collaboration. The most exciting element of this new solution is that we truly see it as a growing evolving product and we look forward to continuing to work with our customer base to develop and add the features and functionality that they request as we continue to release future versions of the platform."

AirIT's new Mobile Application will be available on both Apple IOS and Android platforms. AirIT will work directly with its customers to assist them in developing and implementing a strategy to add the mobile functionality into their existing solution environments.

About AirIT

AirIT is an information technology firm based in Orlando, FL. The company's comprehensive portfolio of solutions enable airports and airlines to better utilize and manage resources, enhance the passenger experience, reduce costs, and optimize revenue generation. Our airport operational, passenger processing, and revenue management platforms deliver enterprise-class business intelligence solutions and are the most innovative in the air transport marketplace. AirIT solutions are operational in 30 of the top 50 airports in North America, and as a testament to their scalability, these solutions are at home in another 100 airports and at 60 airlines worldwide.
